# Examining Collaborations among Nonprofit Organizations for Socially Responsible Programs

## Abstract

Nonprofit organizations (NPOs) increasingly implement socially responsible programs to address their responsibilities toward society. While collaborations are a valuable means to tackle complex social issues, NPOs also similarly collaborate with other NPOs for delivering socially responsible programs. However, the motivations driving NPOs to collaborate with likeminded organizations for socially responsible programs remain unclear. Using a single embedded in-depth case study research design, our purpose is to examine the formation of collaborations among sport federations and sport clubs for socially responsible programs. Reflecting the interplay between resource-based view and institutional perspectives, our findings intrinsically indicate that partners demonstrate similarity in their motivations to collaborate due to their organizational fit, but with some key differences in the complementary resources they seek. Organizational legitimacy, and resource exchange needs for socially responsible programs are driving the collaboration rather than organizational survival needs. The potential to create social value makes this nonprofit collaboration form unique.

**Key words:** nonprofit collaboration; social responsibility; nonprofit organizations; sport federations; sport clubs; interorganizational relationships; formation.

## Introduction

Nonprofit organizations (NPOs) increasingly embrace the term corporate social responsibility (CSR) to address their social responsibilities toward society (Lin-Hi, Hörisch & Blumberg, 2015). A recent study shows an increasing trend in adoption rates for nonprofits of communication and reporting schemes that express social responsibility, such as the Global Compact or the Global Reporting Initiatives Guidelines (Pope, Bromley, Lim, & Meyer, 2018). This upward frequency underpins a small but growing body of research examining this phenomenon in the nonprofit context (Acar, Aupperle, & Lowy, 2001; Lin-Hi et al. 2015; Pope et al., 2018; Robertson, Eime, & Westerbeek, 2018). These studies purport that it is valuable to discuss the social responsibility of all contemporary organizations not only in the for-profit but also in the nonprofit sector. The social nature of NPOs' activities should not automatically imply social responsibility given their recent irresponsible behaviors such as fraud, corruption or environmental damages (Lin-Hi et al., 2015; Robertson et al., 2018).

NPOs engage in socially responsible programs to play a role beyond service delivery for their members. These practices often extend beyond their core purpose. In the business context, CSR implementation regularly involves collaboration between profit and non-profit (Austin & Seitanidi, 2012a). Similarly, NPOs collaborate with other NPOs for delivering socially responsible programs.

More specifically, extant literature has only examined NPOs as the vehicle for businesses to implement their social responsibility agenda (Austin, 2000). NPOs enacting these practices themselves rather than acting as the recipients of socially responsible programs (Kourula & Laasonen, 2010; Omar, Leach, & March, 2014) have not received much attention and are still in need of empirical examination (Lin-Hi et al., 2015; Pope et al., 2018). While various studies exist regarding why business collaborate with NPOs (Austin & Seitanidi, 2012a; Seitanidi et al., 2010) as well as why NPOs collaborate with business

1  
2  
3 (Herlin, 2013; Omar al., 2014), we know little about motivations for collaboration between  
4  
5 NPOs for social responsibility.  
6

7  
8 This study examines nonprofit collaboration, which concerns different NPOs striving  
9  
10 to address problems - such as education, health and social cohesion (Gazley & Guo, 2015) -  
11  
12 through joint effort, resources, and decision-making and share ownership of the final product  
13  
14 or service (Guo & Acar, 2005). Although nonprofit collaboration has grown significantly in  
15  
16 recent years (Gazley & Guo, 2015), the scholarship in this field overlooks collaboration  
17  
18 among NPOs in the delivery of socially responsible programs. To date, we lack  
19  
20 understanding of what drives NPOs to collaborate with likeminded organizations for the  
21  
22 implementation of socially responsible programs. A better understanding of the motivations  
23  
24 driving NPOs to collaborate for programs that can have an impact on society is a current  
25  
26 managerial and research gap. As such, empirical insights can help us bring to the fore the  
27  
28 mutual social value such collaborations can offer.  
29  
30  
31  
32

33 Drawing on the nonprofit sport sector, the purpose of this study is to examine the  
34  
35 motivations behind the formation of collaborations among sport federations and sport clubs  
36  
37 for socially responsible programs. We study motives for engaging in collaborations to deliver  
38  
39 socially responsible programs from the most common theories used to explain nonprofit  
40  
41 collaboration, namely resources-based view and institutional theory. Our research is  
42  
43 predicated on the following question: what motivates NPOs to collaborate with other NPOs  
44  
45 to implement socially responsible programs?  
46  
47  
48

49 The contribution of this study is twofold. First, it offers a fresh perspective in  
50  
51 nonprofit collaboration scholarship by exploring collaborations formation for non-mission  
52  
53 related activities amongst NPOs (i.e., mission that extend beyond their primary social  
54  
55 purpose). Second, the study expands knowledge related to NPOs and social responsibility by  
56  
57 broadening the role of NPOs in achieving socially responsible objectives, beyond their  
58  
59  
60

1  
2  
3 generally admitted activist, consultant or partner roles (Kourula & Laasonen, 2010). At the  
4  
5 same time, it enlarges the possible forms of collaboration for the delivery of CSR, beyond the  
6  
7 widespread cross-sectoral social collaborations (Peloza & Falkenberg, 2009). By paying more  
8  
9 attention to the spread of this social responsibility movement in the nonprofit domain from  
10  
11 the motivations for nonprofit collaboration formation, scholars and practitioners can gain a  
12  
13 better understanding of the nature of this phenomenon.  
14  
15

## 16 17 **Theoretical Background and Literature Review** 18

### 19 *Social Responsibility in the Nonprofit Sector* 20

21  
22 The applicability of the concept of CSR beyond traditional business has been debated  
23  
24 as CSR extends to other organizational forms such as small and medium enterprises (e.g.,  
25  
26 Amaeshi et al, 2016), public organizations (e.g., Dentchev, Eiselein, & Kayaert, 2018) and  
27  
28 NPOs (e.g., Pope et al., 2018). As such, scholarly activity now includes various organizational  
29  
30 settings despite the “corporate” limitation in the terminology used. Indeed, this general  
31  
32 evolution of CSR has been captured by Bondy, Moon, and Matten (2012) with the notion of  
33  
34 institution, used to describe that CSR has become a taken-for-granted concept spread outside  
35  
36 the classical business spheres.  
37  
38

39  
40 In light of traditional business, CSR is broadly defined as “companies taking  
41  
42 responsibility for their impact on society” (EU Commission, 2011). This study draws on the  
43  
44 large notion of social responsibility which encompasses the voluntary engagement for society  
45  
46 (“doing good”) and the prevention of irresponsible behavior (“avoiding bad”) (e.g., Carroll,  
47  
48 1991; Lin-Hi et al., 2015). As such, this paper builds on the small but growing body of  
49  
50 research on social responsibility in the nonprofit domain (Lin-Hi et al., 2015; Pope et al.,  
51  
52 2018). When referring to this phenomenon, scholars have referred to CSR (e.g., Lin-Hi et al.,  
53  
54 2015), nonprofit responsibility (e.g., Pope et al., 2018) or sustainability (e.g., Fifka et al.,  
55  
56 2016).  
57  
58  
59  
60

1  
2  
3 These studies contend that the social nature and character of NPOs could mislead us  
4 into considering a NPO as being intrinsically socially responsible (Lin-Hi et al., 2015).  
5  
6 Driven by their organizational purpose, the role of NPOs is to provide a ‘social good’ or  
7  
8 service. NPOs are oriented toward social needs, influenced by public issues and changing  
9  
10 public expectations (Selsky & Parker, 2010). As noted by Lin-Hi et al., (2015) “since NPOs  
11  
12 engage themselves for the well-being of stakeholders and society as a whole by pursuing their  
13  
14 social mission, CSR in terms of “doing good” is closely related to their core business” (p.  
15  
16 1963). Consequently, one could consider that these NPOs are automatically seen as being  
17  
18 socially responsible. However, NPO’s socially responsible behaviors should not be taken for  
19  
20 granted given recent examples of irresponsible behaviors in the nonprofit sector (Lin-Hi et  
21  
22 al., 2015). Moreover, the assumption that NPOs are socially responsible per se cannot be  
23  
24 generalized to all NPOs. In the case of NPOs delivering services to a small audience, such  
25  
26 as sport organizations, considering the idea that NPOs are socially responsible is not valid  
27  
28 because they only provide social good to their members and therefore contribute to the  
29  
30 wellbeing of their members only.  
31  
32  
33  
34  
35  
36

37 Carroll (1991) contend that the economic and legal responsibilities are ‘required’  
38 primary social responsibility, while the ethical responsibilities are ‘expected’, and the  
39  
40 discretionary responsibilities are ‘desired’ secondary social responsibilities. Congruent with  
41  
42 this distinction, NPOs have the potential to exert positive social change (Aguilera, Rupp,  
43  
44 Williams, & Ganapathi, 2007) by embracing socially responsible programs into their agenda  
45  
46 through, but also far and beyond, their primary social purpose. Social responsibility is more  
47  
48 than doing good to society by building on organization’s core mission as it may also extend  
49  
50 beyond organizations’ social purpose and existing institutional norms. Socially responsible  
51  
52 programs are projects that neither necessarily nor explicitly derive from their mission  
53  
54 statement. Beyond providing basic social services, NPOs secondary responsibilities can also  
55  
56  
57  
58  
59  
60

1  
2  
3 consist in looking beyond their own interests and contribute to the needs of the community  
4 and society. In other words, although NPOs are social in nature and already contribute to the  
5 well-being of society, they can do more for society, beyond delivering social goods to their  
6 members. That is, they participate in the society carrying out activities in several  
7 environments through collaboration and interaction with various stakeholder groups (Acar et  
8 al., 2001; Misener & Doherty, 2012; Lin-Hi et al., 2015; Robertson et al., 2018). For instance,  
9 Misener and Doherty (2012) found, contrary to the traditional notion that NPOs are the  
10 recipients of donations, examples that illustrated their desire to serve the community beyond  
11 providing basic sport services for members. They reported that clubs collaborated with other  
12 local NPOs to develop civic engagement among its athletes.  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24

25  
26 As CSR is sensitive to institutional context, core social mission and organizational  
27 characteristics (Athanasopoulou & Selsky, 2015), we contend the need for differentiated  
28 research and distinctive approach to nonprofit social responsibility. Interestingly, Selsky and  
29 Parker (2010) noted:  
30  
31  
32  
33  
34  
35

36 “Organizations in every sector are confronted by and must respond to social  
37 challenges. Yet, long established sectoral differences have traditionally led  
38 organizations to frame social challenges in different ways and to address them  
39 with different ends in mind” (p. 21).  
40  
41  
42  
43  
44  
45

46 Thus, in line with Selsky and Parker (2010), we posit that the mature presence of  
47 NPOs in CSR-related process as well as the reported socially responsible NPOs behavior may  
48 call for an examination of the related collaborative means chosen to deliver social  
49 responsibility. Moreover, Austin and Seitanidi (2012a) argued that “NPOs have embraced  
50 collaboration with business as an important mode for the generation of value required for  
51 successfully meeting their missions” (p. 9). Consequently, insights in the motivations for  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 nonprofit collaboration for socially responsible programs are necessary to understand how  
4 such intra-sectoral collaboration can create value.  
5  
6

### 7 *Nonprofit Collaboration Formation*

8  
9  
10 A rich and diverse body of research has focused on nonprofit collaboration that spans  
11 from within-sector (i.e., among organizations from the nonprofit sector) to multi-sector  
12 partnerships (i.e., between organizations from two or more sectors) (Gazley & Guo, 2015).  
13  
14 This study delimits itself in collaboration among NPOs. Therefore, we invariably utilize  
15 nonprofit collaboration when examining within-sector collaboration.  
16  
17  
18  
19  
20

21 In the nonprofit collaboration literature, most studies investigating within-sector  
22 collaboration have looked at the types of collaboration (Foster & Meinhard 2002; Guo &  
23 Acar, 2005; Proulx, Hager, & Klein, 2014), the formation (AbouAssi, Makhoul, & Whalen,  
24 2016; Snavely & Tracy, 2002; Sowa, 2009), the process (Tsais, 2009; Walters &  
25 Anagnostopoulos, 2012) and the impact (Arya & Lin, 2007; Chen & Graddy, 2010), and  
26 termination (Hu, Guo, & Bies, 2016). In the sport literature, special attention was paid on  
27 sport federations and sport clubs collaborative capacity (Doherty, Misener, & Cuskelly, 2014)  
28 to deliver various sport services (Sotiriadou, Bowens, De Bosscher, & Cuskelly, 2017; Vos &  
29 Scheerder, 2014).  
30  
31  
32  
33  
34  
35  
36  
37  
38  
39  
40  
41

42 Collaboration formation informs the decision by organizations to collaborate (Selsky  
43 & Parker, 2005). Initial conditions, antecedents, preconditions, and motivations are frequent  
44 areas in the collaboration formation literature (Austin & Seitanidi, 2012b). The formation is  
45 described as an important precondition to collaboration (Bryson et al., 2015). Most efforts in  
46 the nonprofit collaboration literature relate to the motivations to form collaboration for  
47 services delivery (i.e. programmatic needs in line with organizational goals including social  
48 and elite sport services) (Chen & Graddy, 2010; Snavely & Tracy, 2002; Sotiriadou et al.,  
49 2017; Sowa, 2009), the factors associated with collaboration forms (Guo & Acar, 2005;  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 Proulx et al., 2014), the antecedents and capacity (AbouAssi et al., 2016; Foster & Meinhard,  
4  
5 2002), and the partners selection (Atouba & Shumate, 2015).  
6  
7

8 For instance, Sowa (2009) suggested two motivation levels: motivations associated  
9 with the service delivered and the organization. Guo and Acar (2005) examined the factors  
10 that drive the implementation of formalized nonprofit collaboration - with age, size, budget,  
11 linkages with other nonprofits and industry influencing the formalization. Atouba and  
12 Shumate (2015) examined the factors that affect the structure and configurations of  
13 collaborations – why NPOs collaborate with particular partners. The crux of their work is that  
14 homophily – similarity in terms of attributes, geography and institutional – matters in  
15 nonprofit collaboration.  
16  
17

#### 18 *Motives for nonprofit collaboration for socially responsible programs*

19  
20 Empirical insights from nonprofit collaboration literature might not necessarily help  
21 us understand the motives for engaging in discretionary-based socially responsible initiatives.  
22 NPOs seem to be driven by resource motives in the case of cross-sectoral collaborations  
23 (Omar et al., 2014). Collaborations provide access to additional resources, to learn skills, to  
24 professionalize and eventually strengthen legitimacy (Austin, 2000; Herlin, 2013). However,  
25 what drives NPOs to collaborate to deliver socially responsible programs and what can they  
26 benefit from collaborating for non-mission related actions with likeminded partners remain  
27 unknown. Other motives might be at play, and traditional theories and existing studies on  
28 nonprofit collaboration (Austin, 2000; Sowa, 2009) seem to be unable to explain or do not  
29 fully apply to this collaboration form. Potential differences in benefits for the NPOs pose  
30 critical new research questions that have not been adequately addressed.  
31  
32

33  
34 Bryson, Crosby, and Stone (2015) as well as Gazley and Guo (2015) note that  
35 insufficient attention has been paid to the characteristics of forms of nonprofit collaborations.  
36 Earlier studies (Sowa, 2009; Sotiriadou et al., 2017) suggest that the motivations for nonprofit  
37  
38  
39  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 collaboration could be influenced by the nature of the service delivered. Accordingly, the  
4 motivations to collaborate for socially responsible programs could differ from other  
5 collaboration forms because the creation of positive social change (Aguilera et al., 2007)  
6 underpins these collaborations. Collaborations represent an important vehicle to implement  
7 socially responsible programs, as they have the ability to co-create value for both partners  
8 (Austin & Seitanidi, 2012a). Yet, whether this value co-creation also applies to within sector  
9 collaborations remains unexplored.

10  
11  
12  
13  
14  
15  
16  
17  
18  
19 Multiple perspectives (such as institutional theory, stakeholder theory, resource  
20 dependence theory, transaction cost theory, or network theory to name but a few) have been  
21 employed to theoretically underpin the study of collaboration (e.g., Barringer & Harrison,  
22 2000; Guo & Acar, 2005). Responding to warnings that collaborations cannot be explained  
23 by a single theoretical approach (Barringer & Harrison, 2000; Oliver, 1990), the present study  
24 is also fundamentally guided by principles found in institutional (Oliver, 1990) and resource-  
25 based view perspectives (Barney, 1991). The interplay between institutional and resource  
26 lenses has already been acknowledged in collaboration studies with multiple perspectives  
27 (Barringer & Harrison, 2000) and is particularly relevant in the CSR context (Aguilera et al.,  
28 2007). Resource-based view and institutional theory have been often used as theoretical  
29 frameworks to examine nonprofit organizational motivations.

### 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 *Institutional forces and legitimacy*

47  
48 Institutional theory suggests that the environment pressures organizations to conform  
49 to prevailing rules, requirements and social norms (DiMaggio & Powell, 1983). These  
50 pressures stimulate organizations to pursue activities that may eventually increase their  
51 legitimacy and cause them to appear compliant with their environment (Oliver, 1990;  
52 Barringer & Harrison, 2000).

1  
2  
3 Coercive, mimetic and normative pressures can explain why organizations are driven  
4 similarly (DiMaggio & Powell, 1983). Coercive pressure stems from pressures on the  
5 organizations by other organizations on which the former depends. For instance, NPOs  
6 collaborate to meet legal requirements and mandates such as new reporting standards from  
7 higher authorities (Guo & Acar, 2005). Mimetic isomorphism is the process in which  
8 organizations copy other organizations' legitimate behavior. Consistently, NPOs may  
9 collaborate for socially responsible programs by mimicking successful organizations that  
10 have established best practices such as collaboration and/or social responsibility (Barringer &  
11 Harrison, 2000). For instance, nonprofit collaboration are increasingly popular in the  
12 nonprofit sector to deliver their core purpose, such as in the case of early care services (Sowa,  
13 2006). Normative isomorphism refers to professional networks and industry standards that  
14 contribute to spreading ideas, models and normative rules. For instance, the ISO and GRI  
15 guidelines are important forces facing NPOs and seem to be contributing to the increasing  
16 adoption of socially responsible programs (Pope et al., 2018). Such standards are actively  
17 promoted as one of the preferred ways to meet social needs.

18  
19 Institutional theory is valuable in explaining why NPOs collaborate for socially  
20 responsible programs because it captures the related external social context (Athanasopoulou  
21 & Selsky, 2015). NPOs are pressured to form collaboration for socially responsible programs  
22 because the number of NPOs engaged in collaboration has increased and may therefore  
23 become an institutionalized practice in the nonprofit sector (Proulx et al., 2014). Institutional  
24 forces have also been used in nonprofit collaboration studies to examine why NPOs  
25 collaborate for legitimacy purposes (Sotiriadou et al., 2017; Sowa, 2009, Guo & Acar, 2005).  
26 These studies have particularly depicted normative and coercive pressures acting as driving  
27 forces for NPOs (Chen & Graddy, 2010; Guo & Acar, 2005; Snalvey & Tracy, 2000; Sowa,  
28 2009).

1  
2  
3 Moreover, collaborations have become particularly commonplace and legitimate  
4 means in the realm of CSR (Herlin, 2013). Studies found that it allows a win-win scenario for  
5 both partners, simultaneously ensuring CSR and allowing NPOs to increase their capacity in  
6 the fight against global problems.  
7  
8  
9

10  
11  
12 Furthermore, institutional forces are encouraging NPOs to adopt socially responsible  
13 behavior. Robertson et al. (2018) indeed showed that community sport organizations face  
14 increasing pressures from stakeholders to devote resources to socially responsible programs.  
15 Societal expectations also apply to NPOs because of their significant scale and aggregate  
16 social achievements (Austin, 2000) as well as sports negative impact (i.e., environmental  
17 negative externalities and irresponsible behavior should be compensated by socially  
18 responsible programs).  
19  
20  
21  
22  
23  
24  
25  
26  
27

28  
29 Organizational compliance eventually ensures organizational survival, acceptance and  
30 legitimacy (Oliver, 1990). A central premise of institutional theory is indeed legitimacy,  
31 defined as “a generalized perception or assumption that the actions of an entity are socially  
32 desirable, proper or appropriate within some socially constructed system of norms, value,  
33 beliefs and definitions” (Suchman, 1995, p. 574). Accordingly, Sotiriadou et al. (2017)  
34 suggested that when collaborating with clubs for elite sport services, sport federations  
35 primarily seek legitimacy, understood as enhanced reputation as a center of expertise and a  
36 leading role in the implementation of this service. Sowa (2009) further observed that NPOs  
37 are more likely to collaborate to seek legitimacy when funders place a high value on  
38 collaboration. In that study, she also put forward that forces also drive NPOs to collaborate in  
39 a shared response to problems that cannot be dealt with at the individual organizational level.  
40  
41  
42  
43  
44

53  
54  
55  
56  
57  
58  
59  
60

While institutional forces have been useful in explaining the external social context for social responsibility programs collaboration, this theoretical lens alone may be incomplete in

1  
2  
3 offering a more rounded perspective in what motivates likeminded NPOs to collaborate for  
4  
5 such programs.  
6  
7

8  
9 *Resource Based-View Theory.*

10  
11 The resource based-view theory adds to our examination by bringing to the fore the  
12  
13 importance of sharing resources as well as to accessing unavailable resources needed to  
14  
15 achieve these programs. This lens is used because collaboration for socially responsible  
16  
17 programs is a strategic option, but not necessarily the core purpose of a sport's reason for  
18  
19 existence. NPOs typically are resource constrained (Wicker & Breuer, 2013; Sowa, 2009)  
20  
21 and therefore need to acquire additional resources to implement socially responsible  
22  
23 programming. These resources could include for example human resources, financial,  
24  
25 technological, infrastructure and channels to attract participants to these programs (AbouAssi  
26  
27 et al., 2016). Viewed through the lens of the resource-based view (Barney, 1991) this need  
28  
29 for resource exchange can explain why collaborations occur in relation to socially responsible  
30  
31 programing in NPOs. Partners are seeking to acquire the complementary resources possessed  
32  
33 by each other. In particular, NPOs constantly seek to diversify their source of funding and to  
34  
35 leverage their capacity to become sustainable and effective in achieving their goals and  
36  
37 programmatic needs (Arya & Lin, 2007; Chen & Graddy, 2010; Gazley & Brudney, 2007;  
38  
39 Omar et al., 2014; Sotiriadou et al., 2017). NPOs hold unique capacity, expertise of which  
40  
41 human capital (AbouAssi et al., 2016) and specific expertise (Chen & Graddy, 2010; Omar et  
42  
43 al., 2014) are particularly salient.  
44  
45  
46  
47  
48  
49

50 In this respect, the resource based-view theory brings an important nuance to the study  
51  
52 by providing understanding of why these organizations collaborate beyond the need to  
53  
54 become less dependent on their environment. The theoretical interplay between the  
55  
56 institutional and resources-based view will allow us to discern the motivational forces behind  
57  
58 collaboration for socially responsible programs. On the one hand, there may be pressures at  
59  
60

1  
2  
3 play, yet on the other hand, value co-creation can occur when the needed resources are used  
4  
5 jointly. Overall, the theoretical interplay is fundamental, as collaborating may improve  
6  
7 NPOs' image, which in turn may attract new or additional resources. As noted by Herlin  
8  
9 (2013), "In the case of NPOs, resource acquisition and mission attainment depend on  
10  
11 organizational legitimacy because legitimate organizations are perceived as "more  
12  
13 meaningful, more predictable and more trustworthy" (Schuman, 1995, p. 575)" (p. 4).  
14  
15 Engaging in collaboration for socially responsible programs could allow an NPO to improve  
16  
17 its reputation or image and impress other members in its network such as resource-granting  
18  
19 agencies, external stakeholders, or the general public (Herlin, 2013). Ultimately, legitimacy  
20  
21 might open the doors to other collaboration that may ensure new resources and expertise  
22  
23 (Barringer & Harrison, 2000; Herlin, 2013; Selsky & Parker, 2005).  
24  
25  
26  
27  
28

### 29 **Method**

30  
31 The study adopts an interpretative and embedded single-case study design (Yin, 2013)  
32  
33 which has often been used in previous studies on collaboration (Austin, 2000). Single case  
34  
35 studies are appropriate because they enable theory testing, provide alternative explanations,  
36  
37 and contribute to refine existing theory through replication (Gerring, 2004; Yin, 2013). This  
38  
39 study does not support that its findings are generalizable across all NPOs. However, it  
40  
41 uncovers conceptual and empirical patterns of nonprofit collaboration that may be  
42  
43 transferable to other settings with similar context and characteristics. The unit of analysis is  
44  
45 the within-sector collaboration between sport federations and sport clubs for socially  
46  
47 responsible programs.  
48  
49  
50

### 51 ***Research Setting***

52  
53 This research was conducted among national (Association Royale Belge de Hockey –  
54  
55 ARBH) and regional (Ligue Francophone de Hockey - LFH) sports federations and sports  
56  
57 clubs operating in the French-speaking part of Belgium. Sports federations are sport-  
58  
59  
60

1  
2  
3 governing bodies that organize sports activities and competitions for their members (Winand  
4 et al., 2013). ARBH is responsible for the representation of the sports discipline in  
5  
6 international sports structures, the national teams, the organization of international and  
7  
8 national competition, and the coordination of regional structures. LFH is in charge of  
9  
10 defining the strategic goals, the regulation, the promotion and organization of regional and  
11  
12 local competitions, sports activities and elite sports policy for their members. At the local  
13  
14 level, a dense network of nonprofit sports clubs is responsible for the provision of grassroots  
15  
16 sports (Vos & Scheerder, 2014).  
17  
18  
19  
20  
21

22 Sports federations and sports clubs are nonprofit, service membership organizations  
23 (Doherty et al., 2014). Specific characteristics of NPOs in general are found in these  
24 particular NPOs (Winand et al., 2010). First, their strategic objectives are mostly intangible,  
25 and hence, difficult to measure. Second, they are required to meet their stakeholders' needs  
26 and expectations. Third, they are financially constrained, especially due to the annual funding  
27 received from public authorities, member fees and the infrastructure costs. Fourth, their  
28 internal functioning is often unclear due to the complex human resource balance between  
29 paid staff and volunteers (Wicker & Breuer, 2013; Winand et al., 2010). Fifth, they have a  
30 small-scale decentralization and flat organizational hierarchy. Sixth, they are moving to a  
31 more business-like and professionalization logic (Maier, Meyer, & Steinbereithner, 214).  
32  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42  
43  
44

45 The case study focused on joint socially responsible programs developed by hockey  
46 federations and hockey clubs. In this respect, the study's context suggests a dyadic  
47 collaboration among these NPOs. The focus was on two socially responsible initiatives,  
48 which go beyond their narrow sport mandates. First, *Hockey Together* (HT), jointly operated  
49 with several sport clubs and spread across the country with the support of the federations,  
50 aims to integrate persons with a disability through hockey. Second, *Stick to Fair Play*  
51 (STFP), designed by the federations and delivered with the clubs, aims to promote fair play  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 values for hockey in Belgium through awareness campaigns. These initiatives should be  
4 considered as discretionary socially responsible as they draw on and extend beyond these  
5 NPOs core mandate and legal norms. Consistent with Guo & Acar (2005), these two  
6 initiatives are joint programs. Table 1 offers a description of both initiatives.  
7  
8  
9  
10  
11

12 [table 1 here]

### 13 14 15 ***Data Collection***

16  
17  
18 Two data collection techniques were employed in this study, namely, semi-structured  
19 interviews and organizational documents. Collecting evidence from multiple sources offers  
20 different dimensions of the same phenomenon and facilitates triangulation (Yin, 2013).  
21  
22

23  
24  
25 *Semi-structured interviews.* In total, 16 interviews were conducted from May 2016 to  
26 March 2017 with key individuals involved in the design and management of the initiatives in  
27 the national and regional federations and six clubs (see Table 2). We purposefully selected  
28 key actors and “boundary spanners” who were considered as important informants since they  
29 possessed specialist knowledge of the socially responsible program. Employing a “key  
30 informant technique” and following the principles of theoretical saturation - denoting that no  
31 new features emerge from the data in the analysis process (Strauss & Corbin, 1998) - , we  
32 selected and interviewed individuals actively and directly involved in the programs.  
33  
34  
35  
36  
37  
38  
39  
40  
41  
42

43 [table 2 here]

44  
45  
46 We questioned informants to reflect on their social responsibility vision, their  
47 personal experiences, and their specific role regarding the socially responsible initiatives.  
48 Participants were encouraged to discuss retrospectively the objectives and the process to  
49 deliver the initiatives through collaboration. Furthermore, interviews explored the  
50 informants’ perceptions (and their organizations’) motivations for engaging in socially  
51 responsible programs through collaboration, the influence of key partners on the collaborative  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 setting, the nature of the relationship with their partners, the evolution patterns, and the  
4  
5 challenges of working together with other NPOs.  
6

7  
8 *Organizational documents.* Secondary sources provided valuable background  
9  
10 information about the NPOs in question, their strategic orientation, and a decision and action  
11  
12 timeline of the initiatives. All this documentary material – such as annual reports, strategy  
13  
14 notes, brochures, press releases, and presentations to key hockey stakeholders – was either  
15  
16 available on NPOs' official websites or was provided by the participants during interviews. In  
17  
18 total, 52 documents provided information on the context within which socially responsible  
19  
20 programs were implemented.  
21  
22

### 23 *Data Analysis*

24  
25  
26 In line with Miles and Huberman's (1994) framework, we iteratively analyzed data  
27  
28 using both deductive and inductive reasoning. Initially, a number of themes originated from a  
29  
30 review of the literature on collaboration in general (Oliver, 1991), nonprofit collaboration  
31  
32 (Sowa, 2009; Guo & Acar, 2005), and sports management in particular (Babiak, 2007;  
33  
34 Sotiriadou et al., 2017). Consistent with the research question, the themes included motives  
35  
36 related to resources (stability), efficiency, reciprocity, institutional (legitimacy, necessity).  
37  
38

39  
40 First, the lead author read the transcripts several times. Analytical memos as well as  
41  
42 temporal bracketing were processed to identify the major characteristics (Guo & Acar, 2005)  
43  
44 and phases of the collaboration process. Following this, refinement of themes and  
45  
46 development of alternate themes took place. Once all interviews and document passages were  
47  
48 coded according to themes, they were carefully reviewed and then further scrutinized for  
49  
50 relationships and linkages. Analysis of the data was facilitated with Nvivo 11 software. To  
51  
52 ensure consistency and credibility in the analysis process, the coding protocol and the  
53  
54 interpretation of the data was discussed between all authors.  
55  
56  
57  
58  
59  
60

## Findings and Discussion

This study examines nonprofit collaboration between sport federations and sport clubs implementing socially responsible programs. We present our findings building on the perspective of those directly engaged in the collaboration. As a starting point for exploring collaboration among NPOs for socially responsible programs, two complementary theoretical frameworks were used for this study. The interplay between these lenses unveils the uniqueness of this collaboration form.

This study displayed two major motivations. Both federations and clubs pointed to *resource exchange and organizational legitimacy* as primary motivations. Our case shows that each partner reported common and diverse motives to collaborate to deliver socially responsible programs, as suggested by previous studies on collaboration formation (e.g., Gazley & Brudney, 2007; Sotiriadou et al., 2017; Sowa, 2009). The convergence between nonprofit partners' motivations underpins the relationship and eventually contrasts with the divergence between partners found in cross-sectoral collaboration (i.e., strategic versus altruistic goals) (Seitanidi et al., 2010) or in nonprofit collaboration (Sotiriadou et al., 2017).

As resource-based view theory suggests, organizations are not self-sufficient, and revenues are impacting the need for collaboration (Arya & Lin, 2007). The importance of resource in this particular case is not surprising, as NPOs operate in a complex environment characterized by resource scarcity (Wicker & Breuer, 2013). In fact, hockey partners are evolving in an unstable political environment that nudges them to work together in order to attain alternate supplies of resources. The data extract below illustrates the resource instability:

Budgetary speaking, sport is a poor sibling, so we do not have many resources and we are not going to develop them [these collaborative projects].

1  
2  
3 Sponsorship is reaching its limits, political subsidies are what they are, so we  
4 cannot hope to multiply by ten our financial income so we need to deal with  
5 our shoestring means available, with what we have but (...) we also try to use  
6 exchanges and contacts. (Federation 5)  
7  
8  
9  
10  
11  
12  
13

14  
15 Contrary to the resource dependence perspective often mobilised to examine NPO  
16 collaboration for service delivery (Gazley & Brudney, 2007; Sowa, 2009; Sotiriadou et al.,  
17 2017), NPOs do not collaborate for socially responsible programs to exert power and control  
18 over organizations with scarce resources (Barringer & Harrison, 2000). As Sowa (2009)  
19 noted, NPOs first seek their basic programmatic needs before seeking to implement  
20 complementary projects. In this case, collaboration is not a matter of organizational survival  
21 needs.  
22  
23  
24  
25  
26  
27  
28  
29

30  
31 Rather, partners are motivated by the increase of complementary resources to develop  
32 the joint socially responsible initiatives. Our results show that organizations primarily seek to  
33 secure the survival of these initiatives that highly rest on the complementary resources  
34 provided by partners. This means that in this context, NPOs mainly collaborate for the  
35 survival of the initiative, rather than for their basic organization survival needs. As illustrated  
36 by these extracts, resource exchange was central for the both partners: “LFH wished to  
37 accompany closely clubs in the creation and development of their section” (LFH  
38 organizational document). As explained by a club member, expanding the initiative with the  
39 federation’s resources was central:  
40  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50

51  
52 Our goal since the beginning is that the project is open to all partners, so I  
53 don’t ask more that the league joins. So the more people work on it, the  
54 more I am glad in this collaboration. We can hardly develop something on  
55 the national level without the federation support. (Club 3)  
56  
57  
58  
59  
60

1  
2  
3 The desire to pursue common goals stimulated NPOs to put their respective  
4 competencies at the disposal of each other in order to converge toward the development of  
5 socially responsible programs. The literature often identifies reciprocity (Oliver, 1990) as a  
6 determinant to engage in such collaborations. As such, this clubs-federation synergy was  
7 mutually expected to benefit both entities:  
8  
9  
10  
11  
12  
13  
14  
15  
16

17 The federation wanted to support the HT project and help to expand it and  
18 encourage other clubs to open HT (...) But we are conscious that it is a two  
19 way street: thanks to it we will have a visibility (...) it can open doors for  
20 opportunities and give the envy to clubs to be part of the project. It always  
21 works in both directions. (Club 6)  
22  
23  
24  
25  
26  
27  
28  
29  
30

31 A federation member also exemplifies his mutually beneficial position, “we work  
32 closely with the clubs and they come also to us with projects” (Federation 1). This reciprocity  
33 allowed NPOs to pool their competencies to converge toward the fulfilment of a common  
34 objective: the development of the socially responsible initiatives to generate social progress.  
35  
36  
37  
38  
39  
40

41 For instance, in the case of HT, clubs initially developed the idea, served as the  
42 implementation platform through their infrastructure, human resources (sport practitioners  
43 and volunteers), situated knowledge, geographical coverage and local connections with other  
44 organizations and beneficiaries. The federation shared its political (acting as a lobby seeking  
45 subsidies and visibility for the hockey community), human (professional staff), technical  
46 (Expertise and competences), communication (information sharing), network and financial  
47 resources as well as its legitimacy.  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 The collaboration can facilitate information sharing, mobilize complementary  
4 resources and acquire expertise. For instance, as explained by a federation member on a web  
5 page, the resources exchanges: “It is the initiation, making primary contacts, the access to the  
6 community and sharing experiences. I think each section is different but what is important is  
7 sharing between you” (Webinar LFH, 03.26.2018). Statements like this illustrate that  
8 informal resources such as learning, knowledge and diffusion of good practices were  
9 important in the eyes of the partners.  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19

20 Moreover, NPOs reported that they seek to acquire new resources from other partners  
21 as well as enhancing existing collaboration between clubs and federations and new  
22 collaboration ties to reinforce the initiative. This network of resources and lobbying capacity  
23 is illustrated here: “we work closely with the clubs and they come also to us with projects. To  
24 help them, we seek subsidies from the minister” (Federation 1). As outlined in Table 1, the  
25 collaborations for HT and STFP have in turn attracted additional supplies of resources from  
26 public and private partners as well as new partners partaking in the initiatives.  
27  
28  
29  
30  
31  
32  
33  
34  
35  
36

37 Surprisingly, these findings showed that rather than building on asymmetrical  
38 interdependencies inherited from the sports structure in which sport federations, as governing  
39 bodies, are traditionally occupying a hierarchical position over clubs (Babiak, 2007;  
40 Sotiriadou et al., 2017), partners have altered this likely domination and competitive state  
41 (Wicker & Breuer, 2013; Sowa, 2009) into a collaboration position. The lack of asymmetry is  
42 illustrated in this quote: “We are not aware of everything that happens within the clubs but  
43 our goal is to have as much information as possible. Not for control purposes” (Federation 2).  
44  
45  
46  
47  
48  
49  
50  
51  
52

53 The absence of asymmetrical motivation is an interesting insight to understand the  
54 formation of nonprofit collaboration, because this is not systematically the case, as reported in  
55 other nonprofit studies (Sotiriadou et al., 2017). This reciprocity can eventually be explained  
56 by the significant organizational mission and identity fit between these NPOs and previous  
57  
58  
59  
60

1  
2  
3 interdependence experience (Atouba & Shumate, 2015; Seitanidi et al., 2010; Walters &  
4  
5 Anagnostopoulos, 2012).

6  
7 To some extent, these findings concur with Atouba and Shumate (2015) who found that  
8  
9 homophily (i.e., NPOs being more likely to collaborate when they have the same status)  
10  
11 influences the selection of nonprofit collaboration. In this case, these NPOs have similar  
12  
13 cultural and organizational characteristics that explain this complementary fit. These NPOs'  
14  
15 common mission is indeed influential for this fit: "Developing hockey is one of our main goals  
16  
17 as a federation. It is in the ARBH's strategic plan. One of the elements is to increase the number  
18  
19 of sport participants. So why not people with a disability because none of this existed yet."  
20  
21 (Federation 1).  
22  
23  
24  
25

26 The results also showed that sharing similar values is essential in this reciprocal  
27  
28 relationship. As one federation member highlighted; "There are regularly projects which are  
29  
30 always very well welcomed because they correspond to our values. For instance, with HT (...),  
31  
32 we absolutely want that it expands in the entire hockey field (Federation 2)".  
33  
34

35 Ultimately, the resource perspective does not sufficiently provide a complete  
36  
37 understanding of the NPOs' motivations to collaborate. The desire to appear legitimate in the  
38  
39 institutional environment to eventually acquire additional resources to do good for society has  
40  
41 been also evoked. The institutional perspective provides a more complementary  
42  
43 understanding of what motivates NPOs. Our findings showed that organizations sought  
44  
45 collaboration to enhance their legitimacy in order to enhance their organizational positioning  
46  
47 by showing their capacity to have the right practices in place (Herlin, 2013; Sowa, 2006) and  
48  
49 demonstrate their capacity to create social value as in cross-sectoral social collaborations  
50  
51 (Austin & Seitanidi, 2010a).  
52  
53  
54

55 Institutional pressures played a role in encouraging partners to increase their  
56  
57 *legitimacy* in order to appear 'appropriate' in relation to their stakeholders' expectations and  
58  
59  
60

1  
2  
3 prevailing norms in their environment (Di Maggio & Powell, 1983; Oliver, 1990).

4  
5 Collaboration is indeed considered as a leading means to tackle various social issues (Austin,  
6  
7 2000; Gazley & Guo, 2015), while addressing social responsibility is a major strategic  
8  
9 organizational concern (Seitanidi et al., 2010) for NPOs given its taken for granted institution  
10  
11 nature (Pope et al., 2018; Bondy et al., 2012).

12  
13  
14  
15 Compared to the literature, our findings interestingly show that while previous studies  
16  
17 depicted mimetic isomorphism influencing NPOs to collaborate (Guo & Acar, 2005; Oliver,  
18  
19 1990; Sotiriadou et al., 2017; Sowa, 2009), organizations were not motivated by meeting  
20  
21 explicit institutional mandates or complying with collaborative requirements from funding  
22  
23 partners. Rather, collaborations were self-initiated in the context of the initiatives examined.

24  
25  
26 Eventually, NPOs' collaborative behaviors are guided by the need to achieve  
27  
28 organizational legitimacy. In particular, all partners have shown that legitimacy played a role  
29  
30 in the collaboration, contrary to previous findings (e.g., Sotiriadou et al., 2017) which only  
31  
32 identified such determinant in one of the partners (the federation). Moreover, cross-sectoral  
33  
34 studies only identified legitimacy motivations with the business sector (Seitanidi et al., 2010).  
35  
36 Although NPOs typically possess strong legitimacy attributes (Herlin, 2013; Omar et al.,  
37  
38 2014; Sowa, 2009), they strive for improved internal legitimacy (i.e. by their internal  
39  
40 stakeholders: the member-clubs, the staff and the volunteers) and external (i.e. by the external  
41  
42 stakeholders: sponsors, public authorities, sport organizations) reputation. For instance, LFH  
43  
44 illustrated this drive to enhance their image as a leading organization due to their short  
45  
46 lifespan:  
47  
48  
49  
50  
51  
52  
53

54 It is important for us to get known. That is, externally, that all our stakeholders  
55  
56 know “we are now the league”, toward the Adeps [i.e., public sport  
57  
58 administration], and all the subsidiary authorities, toward the French  
59  
60

1  
2  
3 community, all local actors. (...) and internally, towards our clubs (...) Now,  
4  
5 there are two leagues but the ARBH is still the national umbrella agency. We  
6  
7 exist as a new entity. (Federation 3)  
8  
9

10  
11  
12 Interestingly, several clubs were also driven by the opportunity to make their  
13  
14 members pride of their club:

15  
16  
17 “So this club, if you are proud of what it does, notably, because it empowers  
18  
19 people with disability through sport, if you are proud of that, of the colors of  
20  
21 your club, you will run faster” (Club 4)  
22  
23  
24  
25

26 Using collaborative socially responsible initiatives, NPOs therefore seek to strengthen  
27  
28 their image and their strategic position within their organizational field. Eventually, the  
29  
30 results showed that organizations expressed their legitimacy motivation in different ways,  
31  
32 namely, to demonstrate their capacity to conform to their stakeholders’ expectations and  
33  
34 institutional norms, to solve social problems, and to act as a relevant actor of societal change  
35  
36 building on the intrinsic nature of the NPOs (Lin-Hi et al., 2015; Pope et al., 2018; Seitanidi  
37  
38 et al., 2010). Consistent with legitimacy theory (Suchman, 1995), these findings support that  
39  
40 legitimacy can be both strategic/utilitarian and altruistic (Seitanidi et al., 2010; Selsky &  
41  
42 Parker, 2005).  
43  
44  
45

46  
47 Consequently, findings intrinsically indicate that partners demonstrate similarity in  
48  
49 their motivations to collaborate due to their organizational fit, but with some key differences  
50  
51 in the complementary resources they seek. Overall, the socially responsible program is  
52  
53 driving the collaboration. Viewed as a desirable behavior and a valuable means to address  
54  
55 social problems, the analysis finds that collaboration is a strategic response to legitimacy and  
56  
57 resource needs for the socially responsible programs. The potential to create social value  
58  
59  
60

1  
2  
3 makes this nonprofit collaboration form unique. Partners are motivated by the aim to create  
4 social value that leads to positive social change. This is the catalyst to these collaborations.  
5  
6

7  
8 Eventually, the study makes two contributions. First, this work generates original  
9 insights into the formation of nonprofit collaboration. Although a growing body of research  
10 has focused on the motivations of collaborations among NPOs for specific service delivery  
11 (Sowa, 2006), this article contributes to this emergent field by examining motivations to  
12 engage in nonprofit collaboration for social responsibility programs. This study contributes to  
13 the nonprofit collaboration literature by providing an understanding of how motivations for  
14 nonprofit collaboration for socially responsible programs differ from other nonprofit  
15 collaboration forms depending on the nature of the issue addressed. This study shows that  
16 there are differences in nonprofit collaboration formation depending on the purpose and on  
17 the nature of the issue addressed in the collaboration. Social responsibility programs lead to  
18 differences because of the social value creation aim.  
19  
20  
21  
22  
23  
24  
25  
26  
27  
28  
29  
30  
31  
32

33 The findings originally point that NPOs do not compete for resource although there is  
34 a general competition for resources in the general NPO context (Wicker & Breuer, 2013).  
35 Elements of resource-based view and institutional forces provide explanatory power for  
36 studying the singularity of the formation of collaboration for socially responsible programs.  
37 Prior research found reducing the need to compete for resource and funding uncertainties,  
38 cost savings and a desire to expand services beyond the capacity of partners to be important  
39 drivers of the motivation to collaborate (Chen & Gazley, 2010; Guo & Acar, 2005; Sowa,  
40 2006), whereas we have noted the nonprofit interest in using collaboration as a strategic  
41 response to resource complementarity and social value creation. Overall, the theoretical  
42 interplay is fundamental, as collaborating may improve NPOs' reputation, which in turn may  
43 attract new or additional grant funding. Organizations also seek new partners to build future  
44 relationships in order to enhance and mature existing collaborations. Essentially, these  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

1  
2  
3 findings extend existing work demonstrating that both theories are equally important and  
4  
5 complementary driving forces of collaboration by NPOs (Arya & Lin, 2007; Barringer &  
6  
7 Harrison, 2000). This study contributes to this growing body of research and knowledge by  
8  
9 applying two theoretical perspectives, which complementarily, offer a more rounded  
10  
11 approach on the motivations to engage in social responsibility collaborations.  
12  
13

14  
15 Second, this article contributes to a better understanding of the applicability of social  
16  
17 responsibility in the nonprofit domain by examining nonprofit organizations collaborative  
18  
19 motivations to implement such programs (Lin-Hi et al., 2015; Pope et al., 2018). These  
20  
21 programs are often considered practices that extend beyond their core purpose. In this study,  
22  
23 NPOs are collaborating with likeminded organizations rather than serving either as recipients  
24  
25 or vehicles of socially responsible programs of business (Kourula & Laasonen, 2010); a  
26  
27 stream of research that has predominantly attracted scholarly attention in the nonprofit  
28  
29 literature. The traditional perspective of NPOs as mere passive providers of CSR should be  
30  
31 abandoned. NPOs should rather be regarded as capable proactive implementers of socially  
32  
33 responsible practices. As such, there is some consensus that businesses are not responsible for  
34  
35 addressing all social issues (Amaeshi et al, 2016). That is, although the word “corporate” has  
36  
37 typically been associated with large business organizations, CSR is now being embraced by  
38  
39 organizations of all types and sizes, including nonprofit sport organizations. Moreover, this  
40  
41 study shows that beyond cross-sectoral collaboration, other collaborative forms exist to  
42  
43 implement CSR programs. Within sector collaboration can offer valuable benefits for  
44  
45 organizations willing to implement their social responsibilities with likeminded  
46  
47 organizations. As such, this study extends the roles of collaboration for the implementation of  
48  
49 CSR by considering that profit organizations are not the only organizations capable of  
50  
51 developing collaborations to implement socially responsible programs.  
52  
53  
54  
55  
56  
57  
58  
59  
60

## Conclusions and Future Research

The purpose of this paper was to examine a particular form of collaboration within the nonprofit landscape. In this study, we have indicated key motivations for the formation of collaborations among NPOs for socially responsible programs. As such, three unique features of this collaboration can be highlighted. First, NPOs' motivations stemmed from the potential to create social value from the social responsibility programs implemented through collaboration. As such, this nonprofit collaboration form is unique because socially responsible programs are the catalyst of the collaboration. Second, reflecting the interplay between resource-based view and institutional perspectives, organizational legitimacy and resource exchange needs for socially responsible programs are driving the collaboration rather than organizational survival needs.

Third, the partners demonstrate similarity in their motivations to collaborate due to their organizational fit, but with some key differences in the complementary resources they seek. This suggests that a high degree of organizational characteristics and motivations fit among partners might increase chances to deliver social good at this stage prior to the collaboration implementation. In the case of sport, the network of partners is relatively dense and the degree fit is important.

The findings from this study are limited in their generalization to similar institutional contexts where implicit forms of social responsibility prevails and to similar organizational contexts where voluntary membership organizations are based on a federated structure. Yet, this study may be beneficial for managers willing to work in collaboration for socially responsible programs. Collaboration requires the understanding of the partners' motivation to collaborate. Motivations are preconditions of collaboration formation and many managers tend to miss this important part (Austin, 2000). Beforehand, managers should detect common

1  
2  
3 characteristics and (seek) compatible motivations to inform the decision to partner or not to  
4  
5 partner. Managers can strategically oversee collaboration when they know partners'  
6  
7 motivations. Hence, this should minimize the risk of threats to the implementation of the  
8  
9 collaboration and eventually increasing the potential outcomes of the collaboration.  
10  
11  
12 Furthermore, as collaboration requires various sources, an effective manager should define  
13  
14 the resources their need, detect potential resources to exchange and eventually create new  
15  
16 resource flows through collaboration.  
17  
18

19  
20 However, the study is also subject to some limitations. First, the sports context limits  
21  
22 the findings' universality. Second, the study is based on a dataset collected in a relatively  
23  
24 short period. Third, adopting a single level of analysis limits the findings. These limitations  
25  
26 could be addressed through future investigation  
27

28  
29 First, we encourage future studies to expand knowledge on social responsibility and  
30  
31 NPOs by examining whether and how NPOs from different industry outside sports  
32  
33 collaborate in the delivery of socially responsible programs. Second, as this study has  
34  
35 examined the static motivations of collaboration, a step forward could be opting for a  
36  
37 longitudinal perspective to capture the evolution of the nonprofit collaboration process  
38  
39 (especially within all the chronological stages of collaboration (formation, management and  
40  
41 outcomes) (Selsky & Parker, 2005). Hence integrating the nonprofit collaboration challenges,  
42  
43 resistance, and termination. Third, delving into individual or network-level factors, such  
44  
45 research could pave the way for a better understanding of how they intersect, addressing  
46  
47 issues such as leadership and organizational learning.  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60

### Bibliographical paragraph

Géraldine Zeimers is a PhD Candidate in Sport Management at the Université catholique de Louvain and Ghent University. Her research examines implementation of social responsible programs by nonprofit sport organizations. She explores the interaction and learning dynamics involved in managing collaboration among nonprofit organizations.

Christos Anagnostopoulos is Assistant Professor in Sport Business Management at University of Central Lancashire (UK) and Associate Professor in Sport Management at Molde University College. His research lies in examining organizational processes and concepts that facilitate (or sometimes destroy) value creation through the lenses of (corporate) social responsibility.

Thierry Zintz is Professor Sport Management at the Université catholique de Louvain. He is holder of the Olympic Chair Henri de Baillet Latour and Jacques Rogge. He investigates good governance and change management in international and national Sports Governing Bodies.

Annick Willem is Professor Sport Management at Ghent University. She is holder of the Olympic Chair Henri de Baillet Latour and Jacques Rogge. Her research interests include interorganizational relationships in public and nonprofit sports and knowledge management.

## Tables

Table 1. Contextual background of the case study

Characteristics	<i>Hockey Together</i> (HT)	<i>Stick to Fair Play</i> (STFP)
<b><i>Collaboration Form</i></b>	Informal collaboration and joint program initiative	Joint program initiative
<b><i>Collaboration Background</i></b>	Bottom-up initiative - one club	Top-down initiative - LFH
<b><i>Collaboration Components</i></b>	9 clubs, LFH and ARBH	ARBH, LFH and all clubs on a voluntary basis
<b><i>Collaboration Characteristics</i></b>	<p>Initially, this informal collaboration between LFH, ARBH and sport clubs encompassed distinct decision-making strategies, information sharing and resource exchange.</p> <p>Today, a formal joint program initiative is established between LFH, sport clubs and the Federation of Disability sport (LHF) via the creation of a new formal NPO 'Hockey Together'. The partners mutually share, transfer or combine resources among partners and collectively managed the NPO.</p>	<p>Organizations establish an ongoing relationship through shared, transferred or combined resources. This initiative is coordinated by the three federations (ARBH, LFH and VHL), which collaborate with the clubs.</p>
<b><i>Resources from Federation</i></b>	<ul style="list-style-type: none"> <li>• Technical expertise and competences</li> <li>• Network of partners</li> </ul>	<ul style="list-style-type: none"> <li>• Financial</li> <li>• Staff, athletes and referees</li> </ul>

	<ul style="list-style-type: none"> <li>• Political skills</li> <li>• Staff and volunteers</li> <li>• Communication and learning platform</li> </ul>	<ul style="list-style-type: none"> <li>• Communication and information sharing platform</li> </ul>
<i>Resources from Clubs</i>	<ul style="list-style-type: none"> <li>• Volunteers</li> <li>• Infrastructures</li> <li>• Geographical coverage</li> <li>• Situated knowledge and expertise</li> <li>• Local connection and beneficiaries access</li> </ul>	<ul style="list-style-type: none"> <li>• Volunteers</li> <li>• Infrastructures</li> <li>• Geographical coverage</li> </ul>
<i>Collaboration Evolution</i>	<ul style="list-style-type: none"> <li>• 2009: HT initially started in one club</li> <li>• 2010: A second club joins the initiative</li> <li>• 2015: LFH supports the initiative</li> <li>• 2016: Collaboration convention between LFH and LHF; creation of Hockey Together</li> <li>• 2017: Public subsidies granted; Strategic guidelines developed by all the partners</li> </ul>	<ul style="list-style-type: none"> <li>• 2014: Creation of the first initiative “We respect”</li> <li>• 2016: New initiative ‘STFP’ launched by the LFH, with the support of ARBH and clubs; public and private subsidies granted</li> <li>• 2017 - 2018: Awareness campaign with national team athletes and with international referees</li> </ul>
