

IMPONDERABLE SOUND

This portfolio comes from a sonic art perspective and builds upon the knowledge that low frequency vibration physically affects the body. *Imponderable Sound* represents a new musical approach named, which incorporates low bass frequency to develop new and extended techniques for contemporary composition. Infrasonic vibrations create a sensory and immersive environment that add an extra sensory experience, that of touch, meaning that the work can be perceived haptically, often a neglected area of sonic artworks. This way of working opens possibilities for innovative compositional approaches using only bass frequencies for a sonic art environment.
