How to structure a report on public involvement in a research project

The following table forms the short version of GRPP2¹ and helps to provide a structure for reporting on public involvement in research projects. The same authors also offer a long version that is designed for use when the subject of the research is public involvement itself.

Advice on co-authoring reports and publications, where a public contributor works alongside an academic to produce the report, is available².

Section and topic	Item	Reported on page number
Aim	Report the aim of PPI in the study	4
Methods	Provide a clear description of the methods used for PPI in the study	4
Study results	Outcomes—Report the results of PPI in the study, including both positive and negative outcomes	25
Discussion and conclusions	Outcomes—Comment on the extent to which PPI influenced the study overall. Describe positive and negative effects	25
Reflections/critical perspective	Comment critically on the study, reflecting on the things that went well and those that did not, so others can learn from this experience	25
